

AEROFIX-U™

Rigid polymeric foam pipe support with foam insulating tape and self-sealing closure tapes

Used for properly supporting pipes in chilled water, refrigeration, and hot water heating systems

AEROFIX-U™ is a polymeric rigid foam pipe support with a foam tape inner lining. Aerofix-U supports the weight of insulated piping without compression or the need for additional insulation saddles, provides a full-thickness insulation layer, and absorbs vibration of operating piping. The outer jacket consists of a special rubber with high performance tape that seals the support completely after installation in order to prevent condensation. Its strong, closed-cell structure is ideal for refrigerant and hot water piping, to prevent condensation, save energy, and save on installation cost.
